

an ALL NATURAL
MICROBIAL
SOIL
AMENDMENT
PRODUCT

SoilOx is an all-natural microbial soil inoculant that improves fertilizer efficiency, soil structure, and increases plant growth and crop yield. For use on all soil types.

SoilOx is formulated with specialized microbial cultures, metabolites, and critical micronutrients that improve soil microbiology offering multiple benefits.

- Lowered Incidence of Disease
- Improved fertilizer performance.
- Increased root size and branching.
- Improved crop quality in appearance and nutrient content.
- Improved nutrient and mineral availability, uptake, and absorption.
- Improved water uptake and soil water holding capacity.
- Improved soil structure and tilth.
- Restores damaged soil biology.
- Extract nutrients locked in crop residues.
- Outcompete undesirable pathogens and infections.
- Reduces salt stress.
- Increases plant vigor and yield.

SoilOX provides critical beneficial microbial biomass, enzymes, and metabolites that aid in building soil structure, competitive exclusion of pathogens and undesirable species, water retention, and salt reduction.

Soil OX microbes and their enzymatic byproducts facilitate digestion of fertilizers and organic wastes and convert them into useable nutrients for agricultural crops. Soil OX aids in the release of additional nutrients, converts fertilizers into more available nutrients for increased uptake and absorption improving fertilizer efficiency.

Specifically formulated fertilizer biocatalyst that can be applied directly to the soil as a pre-plant or post plant treatment, broadcast or tank mixed.

APPLICATION RATES PER ACRE:

Broadcast or Fertigation: 2 to 4 quarts per acre

Side dress or starter: 1 to 2 quarts per acre
